

**SUSTAINABILITY
ISN'T IDEOLOGY**

IT'S PHYSICS

That's not politics. Just cause and effect.

EARTH IS A CLOSED SYSTEM

Energy enters from the sun. Matter stays.

Matter stays.

THERE IS NO EXIT & NO RESET BUTTON

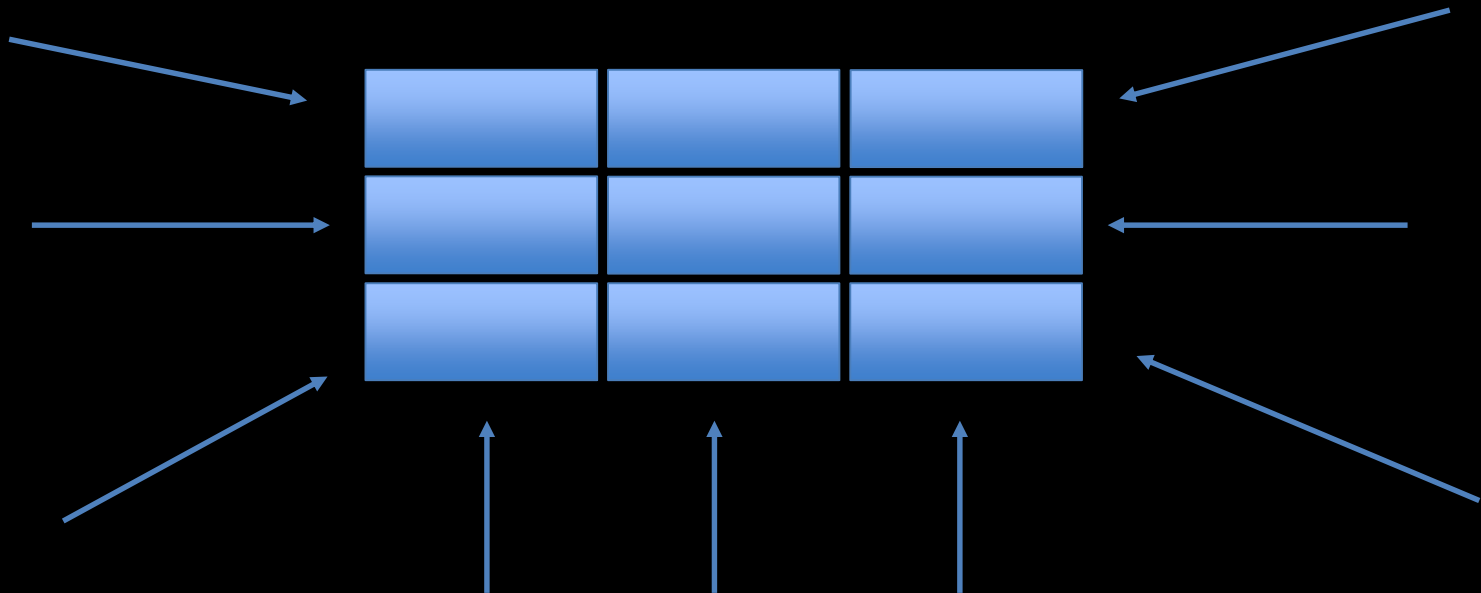

So outputs accumulate

STOCK VS FLOW

The problem isn't emissions.

It's accumulation

MORE EMISSIONS

=

MORE RISK

Environmental
disruption

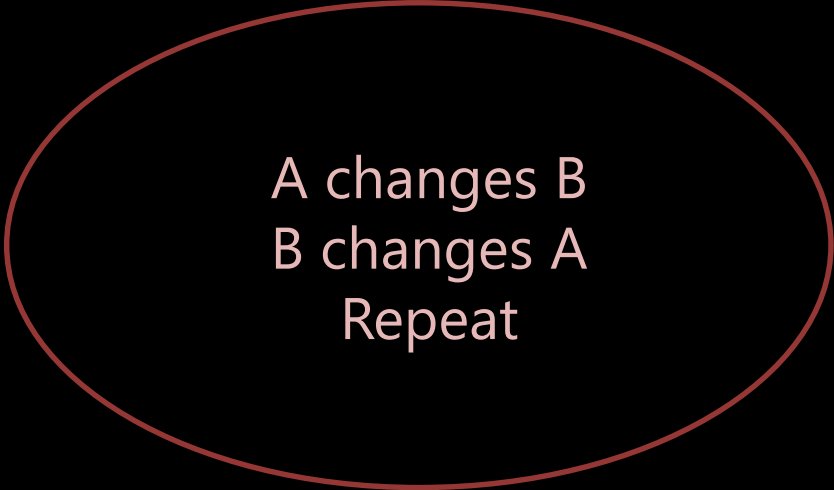

Economic
volatility

Social
instability

Further amplified by feedback loops

FEEDBACK LOOP

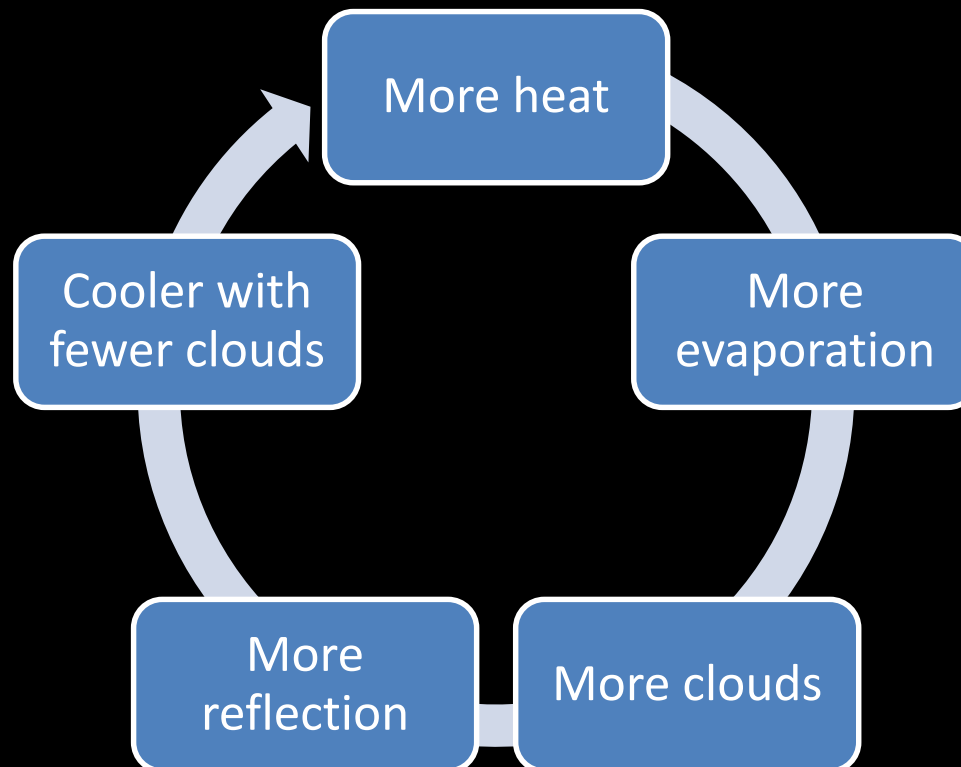

When outputs become inputs.

A changes B
B changes A
Repeat

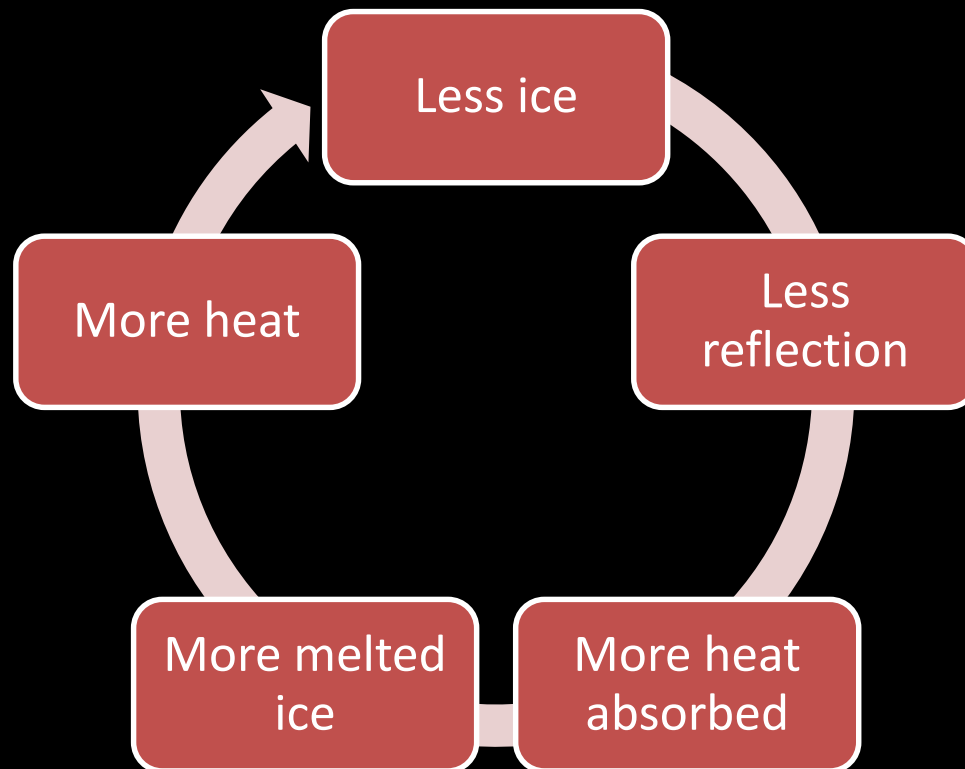

STABILIZING FEEDBACK

The system pushes back & self corrects

AMPLIFYING FEEDBACK

The system accelerates, without brakes.

TIPPING POINTS

Systems hold, until they don't.

HUMAN ACTIVITY DRIVES AFFECTS THESE SYSTEMS

But not equally.

71% OF INDUSTRIAL EMISSIONS COME FROM ~ 100 COMPANIES

Not Jim's tire shop.
Not Svenja's sewing company.

THE PHYSICS ISN'T THE DEBATE

Who's responsible?

Who pays?

Does the system built to fix it work?

NEXT VIDEO

From "don't dump chemicals in the river"
to a \$30B compliance industry.
